Genuine Volvo Windshield

Statement on the Replacement of the Windshield

The Windshield is an integral part of the design of Volvo vehicles. As such, Volvo Car Canada requires that all windshield replacements on Volvo vehicles be performed according to Volvo standards, at an authorized Volvo facility, using only a Volvo Genuine Windshield and Volvo Genuine Adhesive.

Precise Engineering for your Volvo

Volvo Car has designed the windshield to meet very precise requirements which are critical for both driving comfort and safety. By providing an undistorted view for the driver, and by supporting the unique design requirements on vehicles with Heads up Display, a Volvo replacement windshield ensures comfortable vehicle operation. As a critical structural component of the vehicle, a Volvo windshield serves a key safety function by enhancing the overall strength of the car. A precise fitment, using a Volvo windshield and adhesive is therefore a critical safety consideration.

Volvo Car cannot verify if non-Volvo windshields and windshield adhesives are being manufactured to the exact specifications Volvo requires and this may affect the performance of both active and passive safety systems.

Supporting the IntelliSafe Active Safety System

The windshield is vital for the correct function of Volvo Car IntelliSafe active safety system. The camera and radar sensors are located inside the upper edge of the windshield, and these sensors are sensitive to optical and geometric variations in the glass. These sensors must have an undistorted view in front of the car to work optimally, and to achieve this, Volvo Car has outlined precise requirements for glass thickness, glazing material and optical quality at all viewing angles.

Using an after-market windshield that doesn't meet the precise specifications outlined by Volvo Car may compromise the function of the IntelliSafe active safety system.

The Benefits of a Genuine Volvo Windshield and Adhesive:

- Structural integrity is maintained without compromise, ensuring the body maintains the same strength as when it was assembled at the factory.
- IntelliSafe continues to function optimally, as designed by Volvo engineers.
- A Volvo approved method for the calibration of the IntelliSafe system is used, ensuring the proper function of the optical, distance and radar based sensors.

After-market services who do not have specialist tools, training and knowledge, may find it difficult to properly install a Volvo windshield to Volvo standards, and may not be able to re-calibrate the active safety systems properly.

When replacement is necessary, only genuine Volvo windshield parts installed by an approved repair facility, can ensure the car continues to function as intended by Volvo Car.
